

ASSET LIFECYCLE MANAGEMENT OVERVIEW

From signal to action, with industry-intelligent AI built in.

Within two years, physical AI adoption is expected to **exceed 80%**, led by manufacturing and logistics.

Source: Deloitte, State of AI in the Enterprise, 2026

As predictive signals move from dashboards to action, teams need a system built to **close the gap between knowing and doing**, before the next failure, deviation, or missed cutoff.

ABOUT US

SimplifyX is the enterprise AI platform purpose-built for asset-heavy, process-intensive organizations where managing thousands of moving parts, teams, and systems at scale directly impacts revenue, risk, and operational performance.

Operations in these industries carry pressures that compound quickly: production timelines that do not flex, compliance records that have to be current before an examiner arrives, and equipment that cannot stop on a schedule. Powered by SimplifyX Vero, its proprietary industry intelligence engine, every solution carries the operational knowledge of each environment built in, with the security and governance enterprises require. SimplifyX serves manufacturing, distribution and logistics, retail, food and beverage, and financial services.

WHY ASSET-INTENSIVE OPERATIONS CHOOSE SIMPLIFYX

01 Deep industry intelligence

Patterns from manufacturing, distribution and logistics, retail, food and beverage, and fleet and transportation shape how solutions behave, connecting what the data shows to the next best step in each operation.

02 Results that move the business

Solutions focus on the work that carries the commitment, across operations, maintenance and reliability, and compliance, measured in the throughput, service levels, and cost you already report.

03 Enterprise-grade risk and control

Execution runs with clear guardrails, human oversight, and full audit trails so governance, compliance, and board expectations are met as usage grows.

04 End-to-end operations, not more tools

Cross-functional work runs as one coordinated flow across the systems you already own, reducing handoffs and manual effort without adding another point solution or replacing what runs today.

05 From signal to action

Agents read the signals from models, documents, and events and prepare the coordinated next steps before anyone opens a screen, so risks, exceptions, and opportunities arrive ready to act on, with your people making the call and staying in the loop.

06 Built for teams, not just developers

Configuration, low-code tools, and reusable patterns let operations and business teams help design and refine solutions, shortening the path from idea to production.

INDUSTRIES WE SERVE

MANUFACTURING

DISTRIBUTION & LOGISTICS

RETAIL

FOOD & BEVERAGE

CORE PLATFORM CAPABILITIES

MULTI-AGENT ORCHESTRATION

Coordinate specialized agents so complex, cross-functional work runs as one flow.

WORKFLOW AUTOMATION

Automate cross-team processes end to end from initial intake through resolution.

DOCUMENT INTELLIGENCE

Read, extract, and act on unstructured documents and records at scale.

100+ PRE-BUILT INTEGRATIONS

Connect rapidly to your core systems of record without heavy custom builds.

GOVERNANCE & SECURITY

Enforce enterprise controls, policies, and permissions on every workflow and agent.

OBSERVABILITY & EVALUATIONS

Track behavior and performance so automations stay accurate, reliable, and compliant.

BYOC (Bring Your Own Cloud) DEPLOYMENT MODEL

Run with the models and clouds you prefer, aligned to IT standards.

EXAMPLE USE CASES

OPERATIONS

Flow Command Panel

Keeps a current, end-to-end picture of operations across the systems of record. When an asset goes down, it ranks the recovery options against what is at stake and routes each action to the right person, so commitments are protected before they are missed.

COMPLIANCE

Continuous Audit

Keeps maintenance, inspection, and quality records continuously indexed and audit-ready, so a line can be cleared, a lot traced, or an examiner answered as work happens, with readiness ahead of the Food Safety Modernization Act traceability deadline in July 2028.

MAINTENANCE

Technician Connection

By the time a technician reaches the asset, the history, the ranked likely causes, and the parts likely to be needed are ready, with a senior technician reachable across channels, so the fix is right the first time and the knowledge stays with the team.

RELIABILITY

Reliability HQ

Turns predictive equipment health signals into a ranked, coordinated maintenance and production response before a failure stops the line, so more of the capacity you already paid for is within reach without new capital, with each response routed to the team that owns it.

Industry Intelligent AI. Production Ready.

Ready to find the workflows where AI agents will make the biggest impact? Let's talk.
