

COMPANY OVERVIEW

Industry-intelligent AI that turns complex operations into coordinated action.

According to Deloitte’s 2026 State of AI in the Enterprise report, **23% of companies are using agentic AI at least moderately today, but within two years, nearly three in four companies, 74%, expect to do so.** As agentic AI moves from experimentation to enterprise execution, organizations need systems built for real workflows, governance, and production-ready scale.

ABOUT US

SimplifyX™ is the enterprise AI platform purpose-built for asset-heavy, process-intensive organizations where managing thousands of moving parts, teams, and systems at scale directly impacts revenue, risk, and operational performance. Security, governance, and full audit trails run on every deployment, so enterprises have the oversight boards expect and regulators require. Powered by SimplifyX Vero, its proprietary industry intelligence engine, every solution carries the knowledge of how each sector operates. SimplifyX serves financial services, manufacturing, distribution and logistics, retail, and food and beverage.

WHY ENTERPRISES CHOOSE SIMPLIFYX

01 Deep industry intelligence

Patterns from banking, manufacturing, logistics, retail, and life sciences shape how solutions behave, connecting what data shows to the next best step in each domain.

02 Results that move the business

Solutions focus on high-value processes in revenue, risk and compliance, asset maintenance, and operations, with measurable gains in throughput, service levels, and cost.

03 Enterprise-grade risk and control

Execution runs with clear guardrails, human oversight, and full audit trails so governance, compliance, and board expectations are met as usage grows.

04 End-to-end operations, not more tools

Cross-functional workflows run as a single coordinated flow, reducing handoffs, manual effort, and the need to add yet another point solution.

05 From signal to action

Signals from models, documents, and events trigger coordinated tasks across teams and systems so risks, opportunities, and exceptions are acted on, not just observed.

06 Built for teams, not just developers

Configuration, low-code tools, and reusable patterns let business and operations teams help design and refine solutions, shortening the path from idea to production.

INDUSTRIES WE SERVE

FINANCIAL

FINANCIAL SERVICES

ASSET LIFECYCLE MANAGEMENT

MANUFACTURING

DISTRIBUTION & LOGISTICS

RETAIL

FOOD & BEVERAGE

CORE PLATFORM CAPABILITIES

MULTI-AGENT ORCHESTRATION

Coordinate specialized agents so complex, cross-functional work runs as one flow.

WORKFLOW AUTOMATION

Automate cross-team processes end to end from initial intake through resolution.

DOCUMENT INTELLIGENCE

Read, extract, and act on unstructured documents and records at scale.

100+ PRE-BUILT INTEGRATIONS

Connect rapidly to your core systems of record without heavy custom builds.

GOVERNANCE & SECURITY

Enforce enterprise controls, policies, and permissions on every workflow and agent.

OBSERVABILITY & EVALUATIONS

Track behavior and performance so automations stay accurate, reliable, and compliant.

BYOC (Bring Your Own Cloud) DEPLOYMENT MODEL

Run with the models and clouds you prefer, aligned to IT standards.

EXAMPLE USE CASES

FINANCIAL SERVICES

Loan Origination

Reduce loan application fallout from 70% to zero by automating intake, document collection, financial spreading, and credit memo assembly so outcomes reflect credit decisions, not process gaps.

LOGISTICS

Fulfillment Continuity

Avoid cascading disruption that can cost \$260,000/hr by quantifying exposure in real time and coordinating rerouting, order prioritization, and carrier cutoffs mgmt. before commitments are missed.

MANUFACTURING

Production Uptime

Reduce unplanned downtime by 30–50% by turning predictive equipment signals into coordinated maintenance, production, and quality actions before failures stop the line.

FOOD & BEVERAGE

Audit Ready Asset Compliance

Keep production assets inspection-ready year-round by connecting maintenance schedules, sanitation records, and calibration histories into a single audit trail that drives compliance FSMA requirements without the last-minute scramble.

RETAIL

Returns Automation

Recover up to 75-cents/returned dollar vs. a 50-cent industry average by streamlining authorization, inspection, disposition, routing, and refunds so inventory returns to market while demand still exists.

Industry Intelligent AI. Production Ready.
